Meyers Pier project to wrap up by Dec. 31

## \$12.4M cleanup on schedule

By W. Brice McVicar THE INTELLIGENCER

A wet summer and a slow start haven't hindered work at Jane Forrester Park at Meyers Pier as years of industrial use are being

excised from the soil there. The \$12.4-million project, which started earlier this summer, is moving along on schedule and is expected to be completed by Dec. 31. The construction ite, said Judy Beauchamp, project manager for Stanted consulting Inc., is constanty busy with crews carrying out a variety of tasks

"There is an awful lot of work going on," she said. "Clearway's got three crews vorking on the site, Quantum has at least one crew on site and and there's quite few sub-contractors. a few sub-contractors. There's a lot of work going

The project — which includes the creation of a new road at the northern section of the park as well is resurfacing existing roads has been largely funded by the federal government. As part of its divestiture program the federal government provided \$10 million to the city to carry out work equired to the property hich was environmentally damaged due to years of industrial use.

Beauchamp said work is being completed across the

The Meyers Pier remediation construction is progressing as planned. The \$12.4 million project is expected to be completed sometime this winter.

construction site ranging from the erection of a new water pretreatment facility to city services.

The underground services — and when I say up South underground services I'm right now.'

talking about storm, sanitary and water mains - are pretty much complete on Harbour Lane," she said. "They're working their way up South Church Street

changed slightly as work, not impact scheduling or has progressed. Though the main project remains the will be completed in order is the construction of a slur-has been altered but ry wall. This wall will be

Original plans have Beauchamp said this will completion.

One aspect of the project same the schedule of what that has just recently begun beneath the ground along the southern perimeter of Jane Forrester Park and ties in to the environmental work required.

· See 'Meyers' on page 2.

## Meyers project messy but organized

## · Continued from page 1.

"The slurry wall is going in right now and it's very interesting. It's a different type of construction than you would normally find in a typical residential development or something of that nature," she

"It's being put in to prevent water from migrating off the site. It's an impenetrable barrier."

This wall will ensure ground water from the site does not reach the Bay of Quinte.

Instead, this water will be collected in pipes along the base of the slurry wall and will then be pumped to the new pretreatment facility before once again being pumped to the city's water treatment plant to the east.

With extensive digging taking place across the site Beauchamp said crews have come across many old, abandoned fuel lines. She said that was expected but the construction has turned up "many more than we expected.'

It appears, she said, most of these lines were capped and left

beneath the ground. "Overall, things are progressing well. When you look at the site it's easy to see a mass of work going on. It may look disorganized but there is an organization to it," she

While a large fence has been erected to keep residents from wandering onto the site the crews have been co-operative with boaters who dock at Meyers Pier. Those boaters have been allowed access to the parking lot at the southern end of the park.

Beauchamp said both residents and boaters have shown great patience with the construction and are to be commended.

That patience, however, will have to remain in place for a few more months.

"They're scheduled to be done the majority of the work on Dec. 31. There's always been the understanding though that the landscaping won't happen until the spring," Beauchamp said.
