

Clearway Group of Companies Corporate Policy

ENVIRONMENTAL POLICY STATEMENT

HSMS-105-ENPoIS

Ver. 1.0

2023-03-31

As a construction and development enterprise, we recognize the potential environmental impact of our diverse operations. For this reason, we pledge to incorporate sustainable and environmentally conscious practices into our business model, both on-site and within our office premises.

To achieve our environmental sustainability objectives, our commitment entails:

- Integrating environmental concerns into our decision-making, project planning, and company purchasing processes to respect and safeguard the natural environment
- Promoting conservation, reducing wastage, minimizing resource consumption, and building pollution prevention measures
- Adhering to or surpassing relevant federal, provincial, municipal, and local environmental agency standards
- Assessing the areas of our business that interact with the environment, evaluating potential effects and risks, and identifying viable prevention and impact reduction measures
- Staying current on industry guidelines, best practices, resources, tools, and technologies that can prevent and/or mitigate environmental impacts
- Establishing and implementing environmental management procedures within our daily business routines and activities, including environmental emergency response protocols
- Educating and informing our workers, outlining roles and responsibilities, and promoting environmental consciousness
- Communicating our environmental policy and management protocols to external parties, including clients, customers, contractors, consultants and communities where we operate to foster awareness and encourage practice
- Collaborating with environmental consultants, technical professionals, and agencies to enhance our operational knowledge and strengthen our environmental management systems during complex projects
- Monitoring and assessing overall environmental performance for ongoing improvement

Our goal is to pursue continuous innovation and improvement, leading the industry responsibly and profitably towards sustainable growth while making more significant impacts in our industry and communities while reducing our environmental footprint locally and globally.

Anthony Di Battista - President
